admitNation

Consultant - Raw Lead model

How to Upload Leads in the AdmitNation Platform

Introduction

This guide explains how Consultants can upload leads into the AdmitNation platform.

The platform allows users to add leads using two methods: ***Add Single Lead*** or ***Bulk Upload Lead***

Add Single Lead

How to Access

Go to Leads → Lead List → Click Add Lead → Fill the Mandatory Fields → Submit

When you click the ***Add Lead*** CTA, a popup will appear asking you to enter the required details. The following fields are mandatory for adding a lead.

Mandatory Fields

When adding a lead, you must fill all mandatory fields.

The system will not allow the lead to be submitted if any of the following fields are missing:

- First Name
- Country Code
- Mobile Number
- Lead Source

Please ensure these fields are filled in before submitting.

Optional Fields

Last Name, Email Address, Institution, Stream, Degree, Course, Specialisation, Mode of Study, Budget, Preferred Country, Preferred State, Preferred City, Gender, Preferred Language, Preferred Communication Method.

What Happens After You Submit

- The lead is added instantly to the Lead List.
- If validation fails (e.g., invalid phone number), the system will show an error.

If you have any confusion or want to verify whether the lead you uploaded was submitted successfully or if an error occurred you can check this *(Lead Capture API Logs)* for the solution. This page will help resolve all your doubts.

How to View Submission Logs

Every time you add a lead, the system records it in a log. To view logs

Settings → Lead Capture API Logs

This log shows:

- Correlation ID – Unique request identification
- Request Type – Lead (web-to-crm / API)
- Status Codes (e.g., 202, 409, 406)
- Status Text – Explanation of success or failure
- Workflow – Internal process handling the lead
- Updated On – Date and time

Examples include:

- 202 – Lead Captured → Success
- 409 – Lead Already Exists → Duplicate lead
- 406 – Traffic Source Not Available → Wrong or disabled Lead Source
- Validation Error → Incorrect or missing values

Key Takeaways

Adding a single lead is a quick and simple process when all mandatory fields are filled correctly. Once submitted, the system immediately validates the data and adds the lead to the Lead List. If any issues occur such as incorrect values, duplicate entries or missing mandatory fields the platform will notify you instantly.

For complete transparency, every submission is recorded in the Lead Capture API Logs, allowing you to review success or error details at any time.

By following the required data format and regularly checking the logs, you can ensure smooth and error-free lead submissions within the AdmitNation platform.

Bulk Lead Upload (CSV)

In Bulk Lead Upload, users can upload multiple leads at once using a CSV file. The system allows a minimum of 1 and a maximum of 100 records per upload.

How to Access

Go to Leads → Lead List → Add Bulk Lead → Upload CSV File → Submit

When you click the Add Bulk Lead CTA, a popup will appear where you can download the Sample CSV file. This file contains the correct structure and example values you can follow while preparing your data.

Make sure to fill in all mandatory fields exactly as required.

If any mandatory field is missing or incorrect, the platform will reject that row and mark it as an error. The data will not be uploaded into the system until the errors are fixed. you can view error on *offline lead upload API logs*

Mandatory Fields

When uploading a lead, you must complete all mandatory fields.

The system will not allow the lead to be submitted if any of the following fields are missing:

- First Name (minimum 3 characters)
- Country Code
- Mobile Number
- Lead Source (UTM Source)

Please ensure these fields are filled in before submitting.

Optional Fields

Last Name, Email ID, Gender, Target College/University, Stream, Degree, Course, Specialisation, Mode of Study, Budget, Country, State, City, UTM Campaign, UTM Content

Important Notes

Follow the Required Data Structure

- Your CSV must align with the platform's accepted data formats to ensure smooth uploading. To view format check API documentation

Use the Data Options Section

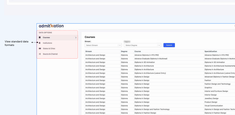
- It ensures correct spelling, approved values, standardised inputs, accurate categorisation, smooth validation and reduced lead rejection; if any value does not match the predefined Data Options, the row will be rejected and you can view these rejected entries in the *Offline Lead Capture API Logs*.

How to add leads in CSV using correct data format

Your CSV must follow the defined data structure used by the platform. You can just copy paste the data into your CSV from data options

To view the correct data format:

Go to Settings → Data Options



View standard data formats

- Browse through the available tabs to review the standard formats for each type of data
- Use these examples as a reference when preparing your CSV file
- Each tab provides the exact field names, data types and acceptable values, helping you create a properly structured CSV before uploading.

Purpose of the Data Options Section

The Data Options section in the left-side menu is provided to ensure user submit accurate, standardised values instead of random or inconsistent data.

Why this is important?

- If your CSV includes incorrect names, the system rejects the record.

Example:

✗ b.tech → Not allowed

✓ Bachelor of Technology → Accepted

This ensures consistent data format in the platform

Note:

Only the following fields are mandatory in the CSV:

- First Name, Country Code, Mobile Number and Lead Source (UTM Source).

All other fields are optional.

- However, if you choose to fill any optional section, you must complete all its dependent fields. Partial data is not accepted.

Field Dependency Rules

To ensure proper validation and data categorisation, the platform requires that certain fields be filled together.

Below are the dependency requirements:

Data Options Available

Courses

The Courses section provides a complete, standardised list of all Streams, Degrees, Courses and Specialisations available on the platform.

Users can browse and select:

- Valid Stream names
- Accepted Degree formats
- Exact Course names
- Approved Specialisation values

Field Dependency Rule

- You may fill academic fields individually, but certain fields require their parent fields to be filled.

The rules are as follows:

- Stream → Can be filled alone.
- Degree → Can be filled alone.
- Course → Requires Stream + Course + Degree
- Specialisation → Requires Stream + Degree + Course + Specialisation.

Institutions

The Institutions section provides a searchable directory of approved institutions, including:

- Institution Name
- Campus
- Address

Users can quickly search and confirm the correct institution details before uploading leads.

Field Dependency Rule

Institution Name → Can be filled alone.

States & Cities

The States & Cities section provides a master list of:

- Countries
- States
- Cities

This ensures users choose locations exactly as defined by the platform.

Field Dependency Rule

If you enter City, you must also include:

- Country
- State

If any of these fields are missing, a validation error will occur and the lead will be rejected. The correct order is: Country > State > City.

UTM Source & Channel

The Source & Channel section contains a predefined list of acceptable:

- Sources (Facebook, Google Ads, Instagram, Chatbot, etc.)

This ensures user tag leads accurately based on where they originated.

Field Dependency Rule

- UTM Source is a mandatory field in the CSV and must be provided for every lead.

Note :

- The Data Options section ensures clean and consistent data by providing users with a standardised reference for correct spelling, approved values, accurate lead categorisation, smooth API validation and reduced lead rejection.
- If any of these fields are missing, the lead will be rejected and logged in the API response.
- Ensure all fields are sent in the correct format to avoid lead sync failures.

What Happens After You Upload CSV

- The lead is added instantly to the Lead List.
- If validation fails (e.g., if you missed any mandatory fields or the data already existing), the system will show an error.

If you have any confusion or want to verify whether the lead you uploaded was submitted successfully or if an error occurred you can check this *(Offline Lead Upload API Logs from settings)* for the solution. This page will help resolve all your doubts.

Here you can view all the status of the lead data can which you uploaded

You can view:

- Total uploaded
- Success count
- Failed count
- Duplicates
- Detailed error file (Download CSV)

You can check the detailed error information by clicking on the number displayed in the table. This will open a popup showing the exact issues found in your CSV file.

If there are no errors, the count will appear as 0.

If you see any other number, it represents the total number of errors detected in your uploaded CSV.

Download the error CSV → fix issues → re-upload.

Conclusion

- You are now ready to upload leads efficiently using both Single and Bulk upload methods in the AdmitNation platform.
- Following the guidelines in this document will help you ensure clean data, smooth validation and accurate lead submissions.
